

BERRY FLOOR

L a m i n a t e

REGENCY

Manufactured using the most advanced production procedures and subjected to the strictest controls, Berry Floor Regency laminate strips are of the DPL (Direct Pressure Laminate) type consisting of 4 layers:

a layer of extremely tough melamine giving the whole strip unequalled resistance to the various hazards of everyday life, and whose transparency allows all the beauty of the design to show through; **a decorative layer**, consisting of various designs more lifelike even than nature, previously impregnated with resin; **a layer of extra strong HDF (High Density Fiberboard)**, whose particles are bonded with a special glue; **a counterbalancing layer** impregnated with resin and melamine, giving the panel stability and ensuring that it is perfectly flat

Regency 120
8 boards/box
